RESEARCH AND DEVELOPMENT UNIT

FACULTY OF MEDICINE

UNIVERSITY OF PERADENIYA

Board of Members of Research and Development Unit

Advisory	Dean/Faculty of Medicine Prof. M.D. Lamawansa
Director	Dr. Sarathchandra Kodikara
Secretary	Dr. L.P.M.M.K. Pathirage
Members	Prof. R. Sivakanesan Prof. V.S. Weerasinghe Prof. P.V.R. Kumarasiri Dr. D.M.G. Fernando Dr. R.M. Mudiyanse Dr. R.M.C.J. Ratnayake Dr. S. Wijetunga Dr T.M.S.H. Dharmaratne Dr. W.D.S.J. Wickramasinghe Dr. D.W.P. Dahanayake Dr. D.R.K.C. Dissanayake Dr. Y. Illangasekara

Forward

Research is a vital component in the development of academic ability. For an academic, one of the benchmarks for moving up the hierarchy from one position to the next is engagement in research. Research contributes to the need for professional growth and teaching. Research carried out in educational institutions contributes to global research and pave way for opportunities to build an imminent economy based on the existing strengths of the resources.

Research has made significant impacts on the social, cultural, economic and environmental aspects of life. Research is the foundation for knowledge that makes possible so much of the innovation and application that provides wider benefit. An advantage of being an active researcher is engagement with current tools and technology which provides the source of new concepts, approaches, techniques and invention across a whole range of disciplinary areas. That doesn't mean that the existing techniques are perfectly sound. There is a need to evaluate whether the methods we employ for research will bring out authentic results. I have seen myself the disparity in the outcome in adopting a technique without due considerations to its validity. As academics we should not consider all what have been published are infallible truths especially in an era of mushrooming online journals with minimum of reviewing processes.

A researcher undertakes research as a quest for basic understanding or with consideration of use. Research is a process of learning in a community of research practice which is much needed for professional practice. The academic studies offer students the chance to learn within a research and a professional practice environment, stimulating creation of knowledge and innovation. The faculty has incorporated this aspect into the curriculum by way of student research projects and as academic we should contribute to this responsibility.

The health field makes significant advances every day. As science reveals and expands, it will cause considerable and important leaps in the area of health and treatments. Nursing research is a vital component to the health care field. Nursing research helps implement new changes in the life long care of individuals and is used to develop treatments that will ultimately bring faster healing and better quality of life to the patients who need those most. Scientific progress and discovery means less disease, fewer illnesses, more vaccines, and a better quality of life for the community as a whole. The best academic research may take ten years or more to find its way into textbooks, but it is applicable in the classroom in real time. This is so in the field of medicine.

The compilation of research competences of the academics of the Faculty of Medicine indicates the vast amount of inputs into this venture in collecting details, verifying the correctness of the records and organizing it in a systematic manner. The Research and Development committee and those who associated with this task should be congratulated for a job done well.

Albert Einstein once remarked: *“If we knew what it was we were doing, it would not be called research, would it?” We can take this cue in our future research.*

Prof. R. Sivakanesan

Summary of Publications 2013 & 2014

Full Articles	170
Abstracts	233
Book Chapters	2
Books	1

Table of contents

	Page number
Department of Anaesthesiology	01-04
Department of Anatomy	05-08
