

2014/15 Batch
Pharmacology Tutorial
Reproductive system and Urinary system
05.09.2019 – 2.30 p.m. – 3.30 p.m.

1. A 30-year old female, 3 months after the birth of her first child considers using a hormonal contraception method.
 - a) Discuss the factors you would consider before prescribing a hormonal contraceptive method to this patient.
 - b) What advices would you give when you prescribe combined oral contraceptive pills to this patient?

2. A 78-year old male presents with Lower Urinary Tract Symptoms (LUTS). Investigations confirm the presence of Benign Prostatic Hyperplasia (BPH).
 - a) List the drugs that could be used in the treatment of this patient.
 - b) Discuss the pharmacological basis of the use of above mentioned drugs.
