

# **2015/16 Batch**

## **Pharmacology Tutorial**

### **CVS**

22.11.2019 – 01.30 p.m. to 02.30 p.m.

A 75-year-old male, with a history of hypertension for 20 years and a ST-segment elevation myocardial infarction 5 years ago, has dyspnoea and fatigue on exertion for 6 months. On examination, his pulse rate is 76 beats/min, regular, and blood pressure 150/90 mmHg. Other physical signs include bilateral basal crepitations and pitting ankle oedema.

An echocardiogram shows left ventricular dilatation with global hypokinesia and an ejection fraction of 35%

Describe the drug treatment of this patient.

**Batch 15/16**  
**Pharmacology Tutorial**  
**CVS**

**Date**  
22.11.2019 (Friday)

**Time**
